PROFESSIONAL SUMMARY

Results-driven DevOps Engineer fresher with strong hands-on experience in AWS, Docker, Kubernetes, and CI/CD automation. Skilled in deploying scalable cloud-native applications and improving deployment reliability using infrastructure as code and monitoring tools. Passionate about automation, cloud technologies, and continuous learning.

TECHNICAL SKILLS

- **Cloud Platform:** AWS (EC2, S3, IAM, VPC, ALB)
- **Containers & Orchestration:** Docker, Kubernetes, Helm
- **CI/CD:** Jenkins, GitHub Actions
- **Infrastructure as Code:** Terraform
- **Scripting:** Bash, Shell scripting
- **Web & Backend:** Python, Django, Nginx
- **Version Control:** Git, GitHub
- **OS:** Linux
- **Monitoring:** Prometheus, Grafana, CloudWatch

DEVOPS PROJECT EXPERIENCE

AWS DevOps CI/CD Deployment (Production-Grade)

- Provisioned AWS infrastructure using **Terraform** (VPC, ALB, public/private subnets, NAT, EC2)
- Built **Jenkins CI/CD pipeline** to automate Docker build, push & deployment to private EC2
- Implemented **bastion host + ALB architecture** for secure high-availability deployment
- Managed Terraform state using **S3 + DynamoDB** with zero-downtime deployment

GitHub: ***https://github.com/Srivenkatesh03/aws-devops-cicd-django-deployment***

MEAN Stack DevOps CI/CD Application

- Built and deployed containerized MEAN stack application demonstrating complete **DevOps lifecycle** from development to production deployment
- Designed Jenkins **CI/CD pipeline** automating build, Docker image creation, and zero-downtime deployment
- Containerized full-stack app using **Docker & Docker Compose** (frontend, backend, MongoDB, Nginx reverse proxy)
- Configured **Nginx reverse proxy** and **load balancing** for routing and static asset delivery

Student Management System – Django, PostgreSQL, Docker, Kubernetes, Prometheus, Grafana

- Developed full-stack Django application with PostgreSQL backend
- Containerized application using Docker and **pushed images** to Docker Hub via **automated CI pipeline**
- Deployed on **Kubernetes cluster** with high availability (2 replicas) and **rolling update strategy**
- Used **ConfigMaps & Secrets** for configuration management
- Implemented **persistent storage and health probes** for reliability
- Integrated **Prometheus and Grafana for monitoring and observability** of the application and cluster.

EDUCATION

BE – Computer Science Engineering — Nehru Institute of Technology (2021-2025)

CGPA: 7.4

CERTIFICATIONS

- Docker Essentials & Kubernetes Essentials – IBM
- IBM Cloud Essentials
- Python Essentials – Cisco
